Powering seamless hybrid platform integration

At Advent One, we understand the challenges organisations face when transitioning from legacy environments to hybrid cloud solutions.
We specialise in helping Australian businesses (mid-sized to enterprise) and government organisations integrate their
on-prem and cloud platforms. Our solutions ensure your infrastructure evolves with you, optimised for security, scalability, and long-term resilience.

Why choose Advent One?

Businesses often struggle with existing systems, inefficient integrations, and rising security risks. Advent One's technology integration services addresses these pain points, with solutions designed to modernise your infrastructure. Here's how we help you:

Inflexible or legacy environments

We modernise your on-premises systems, creating a seamless bridge between your existing infrastructure and cloud platforms.

Lack of automation

Our automation solutions optimise your operations, reducing errors and manual efforts from your team.

Integration challenges

We help you resolve the complexities of integrating diverse platforms, ensuring smooth performance across hybrid environments.

Disaster Recovery (DR) & Business Continuity (BC)

Robust disaster recovery and continuity planning protect your operations.

Misconfigured security stack

We strengthen your infrastructure with comprehensive security solutions.

Legacy system incompatibility

Our solutions connect your existing platforms with modern technologies, enhancing efficiency and minimising interruptions to your operations.

On-shore expertise you can trust:

100% Australian-owned, with over 70 specialists based locally to provide seamless support and deep technical knowledge of your environment.

Security-first mindset:

ISO 27001 certified, embedding security into everything we do, ensuring compliance and proactive protection against threats.

Leaders in automation innovation:

Award-winning automation capabilities that reduce complexity, streamline operations, and empower your team to focus on high-value work.

How we implement

Advent One delivers a step-by-step process designed for minimal disruption and maximum results:

01. Discovery & audit

Full analysis of your existing IT infrastructure, identifying inefficiencies, security gaps, and compatibility issues.

02. Custom strategy design

A tailored plan to address any integration challenges you're experiencing, including data migration, cloud alignment, and security hardening.

03. Deployment & integration

Comprehensive implementation of hybrid cloud and legacy system connectivity, utilising automation to streamline your workflows and reduce human intervention.

04. Security & optimisation

Continuous monitoring, fine-tuning, and proactive security updates to ensure smooth operations, minimise potential risks and allow your team to continue to deliver great outcomes.

Capabilities at a glance

Cloud integration:

We help you scale workloads across on-prem and cloud infrastructures, ensuring seamless data flow and high availability.

Automated deployment and scaling:

With container platforms like Kubernetes, we ensure dynamic scaling and rapid application deployment within your business.

Hybrid platform connectivity:

Consistent, reliable connectivity between legacy systems, private clouds, and public cloud environments to support and optimise your performance.

Built-in security controls:

Advanced controls, including firewalls, encryption, and MFA, protect your systems against security threats.

Data migration:

Leveraging best-practice methodologies, we work with you to facilitate smooth, secure data transitions with minimal disruption to your daily operations.
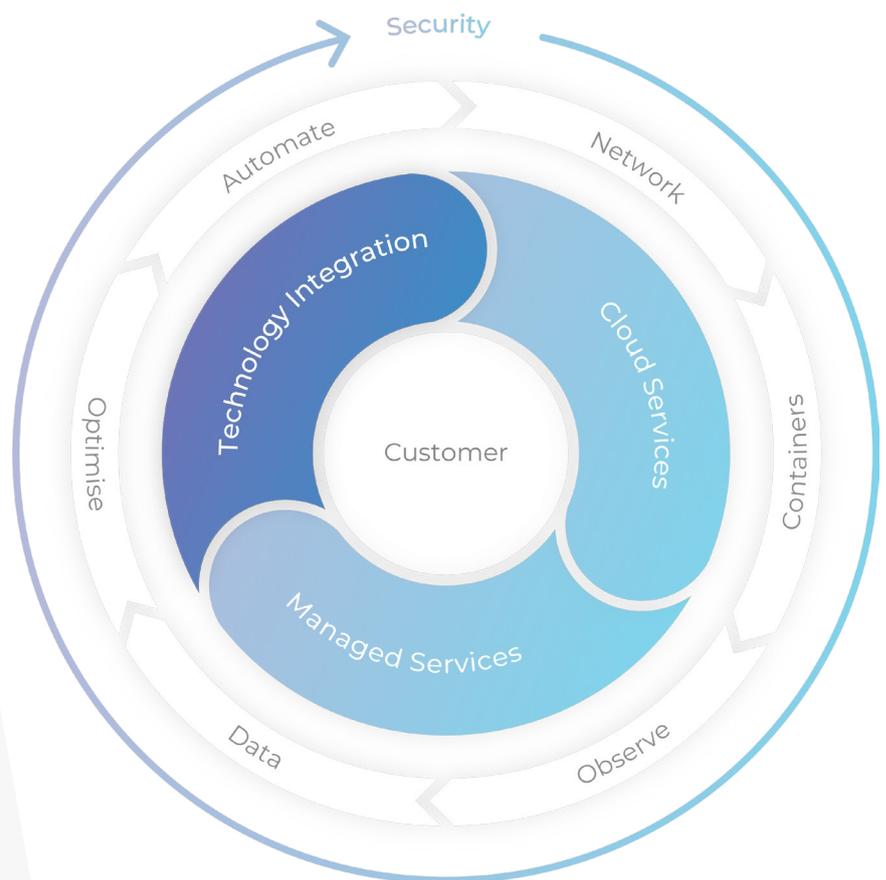

Real-time threat detection:

Our monitoring tools proactively identify vulnerabilities, ensuring rapid response to emerging risks which could interrupt your workflows.
